Full-stack developer and MCA candidate with hands-on experience building distributed, containerized backend systems (Docker, Kubernetes, microservices) alongside GenAI/RAG applications. Shipped 3+ production-style projects across React, Node.js, and Python; solved 1900+ DSA problems.

EDUCATION

National Institute of Technology, Jamshedpur <i>Masters of Computer Applications (CGPA: 8.81)</i>	2024–2027
Patna College, Patna University <i>Bachelors of Computer Applications (CGPA: 8.71)</i>	2020–2023

TECHNICAL SKILLS

Languages: C++, JavaScript(ES6+), TypeScript, Python

Web: Next.js, Node.js, Express, HTML, CSS, Tailwind

Database: MongoDB, Firebase, SQL, PostgreSQL

Tools and Platform: Git, GitHub, Postman, VS Code, Docker, Kubernetes, GitHub Actions, CI/CD

EXPERIENCE

Generative AI Intern <i>NS-Applications</i>	Jan 2026–Mar 2026
- Built a RAG-based chatbot serving 1000+ users, enabling access to government schemes via natural language queries using Python, LangChain, Node.js, and React. - Reduced response latency by 35% and improved answer accuracy by ~25% by optimizing retrieval pipelines, introducing a validation agent + answer grading system, and refining UI performance.	
Web Developer Intern <i>Shikom Solutions, MERN</i>	Dec 2025–Jan 2026
- Developed 5+ Zoho CRM-integrated widgets, improving workflow automation and reducing manual effort for internal teams. - Designed and integrated REST APIs handling 1K+ daily requests, ensuring secure data flow.	

PROJECTS

OpsChat <i>React, Node.js, Socket.io, PostgreSQL, Redis, MinIO, Docker, Kubernetes</i>	GitHub
- Built a scalable, distributed real-time chat system supporting messaging, media uploads (MinIO), and AI-powered translation (Groq), handling 1K+ concurrent connections. - Containerized microservices using Docker and orchestrated them on a Kubernetes (Kind) cluster, implementing CI/CD with GitHub Actions and improving deployment reliability and iteration speed. - Used Redis for session/state management across service instances, reducing cross-service latency under concurrent load.	
SourceSeek <i>GenAI, React, TypeScript, Node.js, Prisma, Hugging Face</i>	GitHub Demo
- Built a full-stack RAG system enabling natural language querying over user-ingested GitHub repositories, using AST-based chunking and vector search (pgvector). - Optimized retrieval and context construction, reducing average response latency by ~30% and improving answer relevance through better chunking and top-k tuning. - Designed the backend API and data layer with Prisma ORM alongside the vector store, balancing structured metadata queries with semantic search.	

ACHIEVEMENTS

Problem Solving: Solved over **1900+** DSA problems across multiple platforms: [LeetCode](#) rating: **1750+ (Top 8%)**.
